

Hay Conditioner

West End mfg.

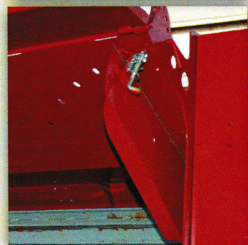

900V2
1100V2

Steel intermeshing rollers with 12 ribs each ensure adequate stem breakage.

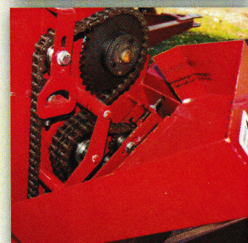

Adjustable wings help determine width of conditioned hay windrow.

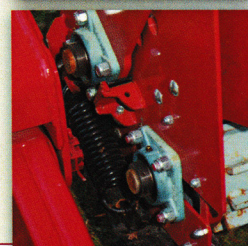

Vertically adjustable deflector angle improves crop flow for less uneven windrows.

Hinged, easy-access side panel.

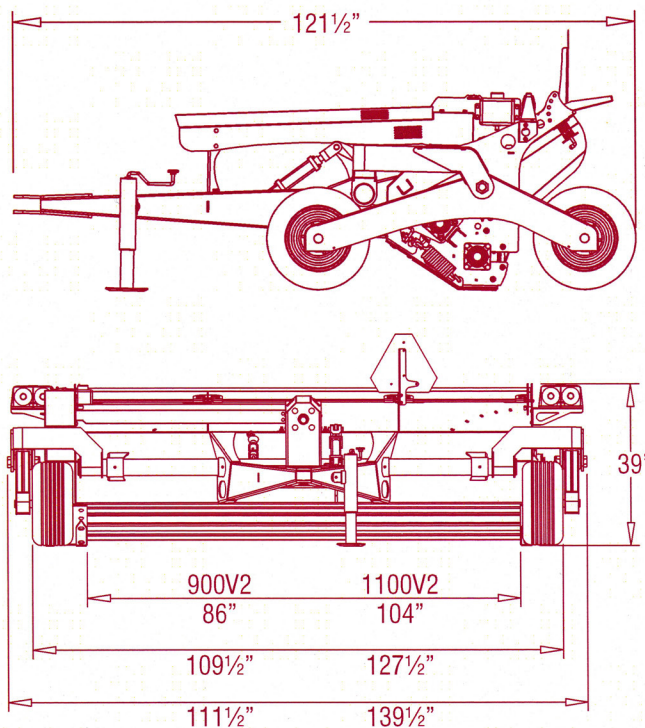

Easily adjust drive-chain tension with easy-reach tensioners. Features #80 roller chain with oiler kit available.

West End Hay Conditioners help you make the most out of limited hay-drying time. When weather leaves something to be desired, hay conditioning can significantly improve the quality and consistency of your hay. The West End Hay Conditioner will do the job quickly and easily. Not only does the conditioner pickup, fluff, and reposition cut hay; its intermeshing rollers also crack hay stems to quicken drying.

Going tandem offers smoother rides and cleaner pickup with even windrows. Wheels tracking in front and behind the frame results in narrower wheel spacing and therefore less tramped hay in the windrows. Tube frame structure ensures adequate frame strength. Invest in a West End hay conditioner today, and reap the rewards of better, softer hay.
